

1    **ABSTRACT OF THE DISCLOSURE**

2           A desk calendar has a base, a calendar page binder, two end blocks and a  
3    central block. The base has a top, a rear end, two sides, an auxiliary appliance  
4    stand and a channel. The auxiliary appliance stand is formed on the top to  
5    provide a place for an auxiliary appliance. The channel is defined in the top  
6    along the rear end of the base. The calendar page binder is mounted on the top of  
7    the base adjacent to the auxiliary appliance stand to hold calendar pages. The end  
8    blocks are securely mounted respectively in the ends of the channel. The central  
9    block is mounted in the channel between the end blocks to define two spaces  
10   respectively between the central block and the end blocks and has at least one  
11   pen hole.
